Education

University of Maryland, College Park **June 2026**
Bachelor of Science in Computer Science, BS Finance (Double Major) *GPA: 3.8*

Experience

Amazon **July 2026 – Present**
Software Engineer

- Built an automation workflow for seller fraud appeals that runs each appeal against an **LLM** trained on our SOPs, increasing automation rate from **20% to 30%** with precision of **96.5%**.
- Redesigned team's **CI/CD** pipelines to support full continuous deployment, building **integration tests** across services to catch regressions before production and reducing P99 time-to-prod from ∼4 days to a few hours.

Mindgrasp **March 2025 – May 2026**
Software Developer

- Consolidated **6 microservices into one unified backend** in **NestJS**, reducing latency by 15% and simplifying development and deployment.
- Leveraged the emerging **Model Context Protocol (MCP)** to build servers that connected an agent-based LLM with **Canvas LMS** and **Panopto**, enabling real-time data retrieval and automating context-aware tasks for users, increasing MRR by $25,000.
- Redesigned **Retrieval-Augmented Generation (RAG)** and **agent-based LLM** pipelines, resulting in a more accurate tutoring agent.

Amazon **May 2025 – August 2025**
SDE Intern

- Migrated critical features and modernized a frontend from a **Ruby**-based portal to a modern **React** + **Java** microservice architecture, improving performance, security and maintainability.
- Wrote and executed **unit**, **integration**, and regression tests in **Java** and **Jest** to ensure backward compatibility and minimize production issues post-launch.
- Ensured secure handling of consumer data by implementing **encryption**, **IAM** role-based access controls, and vulnerability patching during migration.

Spark my Sport **March 2024 – August 2024**
Lead Software Engineer *https://web.sparkmysport.com/*

- Spearheaded the development of the Spark My Sport website by integrating data-based charts, analytics, and AI features with **Next.js**, **OpenAI**, and **MySQL**, resulting in a platform now utilized by over 1000 coaches, scouts, and athletes to enhance decision-making.
- Launched 60+ **RESTful APIs** and **websockets** to present live stats and analysis for hundreds of concurrent viewers.
- Built a **computer vision** model in **PyTorch** trained on NBA player shot footage to analyze students' shooting form and deliver automated feedback, used by athletes on the platform

Projects

Cuttr | *Co-founder & CTO* | github.com/ClipPilot/clipper **December 2025 – April 2026**

- Built and scaled an AI marketing platform to **$15K MRR** that automatically found and edited the most viral moments in long-form video, and generated UGC ads with foundation video models (**Kling**, **Veo**).
- Trained a custom **OpenCV** scene-detection model on gaming footage for a client, automating clipping to produce **200+ clips a day**, far beyond what human clippers could output.
- Architected the production **AWS** stack in **Terraform**: **SQS**-driven **FFmpeg** workers on **ECS**, Python **Lambdas** for scene, silence, and speaker detection, and **Step Functions** for social media data collection.
- Built a multi-agent system (**Mastra**, **OpenAI**, **Gemini**) that deconstructed high-performing ads into scripts and storyboards and recreated them for a client's product with AI video and voice cloning.

Fin Sims | *Python, PyTorch, FastAPI, statsmodels* **August 2025 – January 2026**

- Built a cross-sectional equity model on **CRSP** data (1.2M+ stock-months), selecting 40 of 209 factors via **Fama-MacBeth** regressions, served through a **FastAPI** backend.
- Backtested a decile long-short portfolio out-of-sample (2008–2023), achieving a **1.2 Sharpe ratio**; integrated **Kalshi** prediction-market data as a sentiment signal.
- Trained a reinforcement learning **PyTorch** agent that tunes strategy parameters based on PnL, with **LSTM** time-series forecasts as inputs.

Technical Skills

Programming Languages: Java, Python, TypeScript, JavaScript, SQL, C++, C, Swift, HTML, CSS
Full-Stack Development: React, Next.js, Node.js, NestJS, Flask, Django, FastAPI, REST APIs, AWS, MongoDB, Firebase, MySQL, Supabase, PostgreSQL, Pinecone, DynamoDB
Data Analytics/AI: PyTorch, TensorFlow, Scikit-learn, Pandas, Jupyter Notebooks, Matplotlib, Streamlit
